PREScribed MINIMUM BENEFITS

(Original PMBs and amendments)

February 2003
1. EXPLANATORY NOTE

The objective of specifying a set of Prescribed Minimum Benefits within these regulations is two-fold:

(i) To avoid incidents where individuals lose their medical scheme cover in the event of serious illness and the consequent risk of unfunded utilisation of public hospitals.

(ii) To encourage improved efficiency in the allocation of Private and Public health care resources.

The Department of Health recognises that there is constant change in medical practice and available medical technology. It is also aware that this form of regulation is new in South Africa. Consequently, the Department shall monitor the impact, effectiveness and appropriateness of the Prescribed Minimum Benefits provisions. A review shall be conducted at least every two years by the Department that will involve the Council for Medical Schemes, stakeholders, Provincial health departments and consumer representatives. In addition, the review will focus specifically on development of protocols for the medical management of HIV/AIDS. These reviews shall provide recommendations for the revision of the Regulations and Annexure A on the basis of:

(i) Inconsistencies or flaws in the current regulations;

(ii) The cost-effectiveness of health technologies or interventions;

(iii) Consistency with developments in health policy; and

(iv) The impact on medical scheme viability and its affordability to Members.
2. LIST OF PRESCRIBED MINIMUM BENEFITS

Treatment: Diagnosis, medical management and medication, to the extent that this is provided for by way of a therapeutic algorithm for the specified condition, published by the Minister by notice in the Gazette."
3. **EXPLANATORY NOTES AND DEFINITIONS TO PMBs**

1) Interventions shall be deemed hospital-based where they require:
   - An overnight stay in hospital.
   - The use of an operating theatre together with the administration of a general or regional anesthetic.
   - The application of other diagnostic or surgical procedures that carry a significant risk of death, and consequently require on-site resuscitation and/or surgical facilities.
   - The use of equipment, medications or medical professionals not generally found outside of hospitals.

2) Where the **treatment component of a category in Annexure A is stated in general terms** (i.e. "medical management" or "surgical management"), it should be interpreted as referring to prevailing hospital-based medical or surgical diagnostic and treatment practice for the specified condition.
   Where significant differences exist between Public and Private sector practices, the interpretation of the Prescribed Minimum Benefits should follow the predominant Public Hospital practice, as outlined in the relevant provincial or national public hospital clinical protocols, where these exist.
   Where clinical protocols do not exist, disputes should be settled by consultation with provincial health authorities to ascertain prevailing practice. The following interventions shall however be excluded from the generic medical / surgical management categories unless otherwise specified:
   - Tumor chemotherapy
   - Tumor radiotherapy
   - Bone marrow transplantation / rescue
   - Mechanical ventilation
   - Hyperbaric oxygen therapy
   - Organ transplantation
   - Treatments, drugs or devices not yet registered by the relevant authority in the Republic of South Africa

2A) In respect of treatments denoted as "medical management" or "surgical management," note (2) above describes the **standard** of treatment required, namely “prevailing hospital-based medical or surgical diagnostic and treatment practice for the specified condition.” Note (2) does not restrict the setting in which the relevant care should be provided, and should not be construed as preventing the delivery of any prescribed minimum benefit on an outpatient basis or in a setting other than a hospital, where this is clinically most appropriate.”

3) **“Treatable” cancers.** In general, solid organ malignant tumors (excluding lymphomas) will be regarded as treatable where:
i) they involve only the organ of origin, and have not spread to adjacent organs
ii) there is no evidence of distant metastatic spread
iii) they have not, by means of compression, infarction, or other means, brought about irreversible and irreparable damage to the organ within which they originated (for example brain stem compression caused by a cerebral tumor) or another vital organ
iv) or, if points i. to iii. do not apply, there is a well demonstrated five year survival rate of greater than 10% for the given therapy for the condition concerned

4) **Tumour chemotherapy with or without bone marrow transplantation and other indications for bone marrow transplantation.**

These are included in the prescribed minimum benefits package only where Annexure A explicitly mentions such interventions. Management may include a first full course of chemotherapy (including, if indicated, induction, consolidation and myeloablative components). Where specified in terms of Annexure A, this may be followed by bone marrow transplantation/rescue, according to tumour type and prevailing practice. The following conditions would also apply to the bone marrow transplantation component of the prescribed minimum benefits:

i) the patient should be under 60 years of age
ii) allogeneic bone marrow transplantation should only be considered where there is an HLA matched family donor
iii) the patient should not have relapsed after a previous full course of chemotherapy
iv) (points i. and ii. shall also apply to bone marrow transplantation for non-malignant diseases)

5) **Solid organ transplants.** The prescribed minimum benefits Annexure include solid organ transplants (liver, kidney and heart) only where these are provided by Public hospitals in accordance with Public sector protocols and subject to public sector waiting lists.

6) In certain cases, **specified categories shall take precedence** over others present. Such “overriding” categories are preceded by the sign “#” in their descriptions within Annexure A. For example, where someone is suffering from pneumonia and HIV, because the HIV category (168S) is an overriding category, the entitlements guaranteed by the „pneumonia™ category (903D) are overridden.

7) **Hospital treatment where the diagnosis is uncertain and/or admission for diagnostic purposes.** Urgent admission may be required where a diagnosis has not yet been made. Certain categories of prescribed minimum benefits are described in terms of presenting symptoms, rather than diagnosis, and in these cases, inclusion within the prescribed minimum benefits may be assumed without a definitive diagnosis. In other cases, clinical evidence should be regarded as sufficient where this suggests the existence of a diagnosis that is included within
the package. Medical schemes may, however, require confirmatory evidence of this diagnosis within a reasonable period of time, and where they consistently encounter difficulties with particular providers or provider networks, such problems should be brought to the attention of the Council for Medical Schemes for resolution.

8) a) NOS = not otherwise specified.
   b) In respect of Code 902M (Diagnosis: Infertility), 'medical and surgical management' shall be limited to the following procedures or interventions:
      a) hysterosalpingogram
      b) the following blood tests:
         a. Day 3 FSH/LH
         b. Oestradiol
         c. Thyroid function (TSH)
         d. Prolactin
         e. Rubella
         f. HIV
         g. VDRL
         h. Chlamydia
         i. Day 21 Progesterone
      c) laparoscopy
      d) hysteroscopy
      e) surgery (uterus and tubal)
      f) manipulation of ovulation defects and deficiencies
      g) semen analysis (volume; count; mobility; morphology; MAR-test)
      h) basic counseling and advice on sexual behaviour, temperature charts etc.
      i) treatment of local infections.”
